Truancy Sep 28 2020 Truancy: Short and Long-term Solutions is a practical and accessible guide to dealing with the problem of truancy and non-attendance. It is the first book on the issue to actively focus on solutions to the problem, rather than the causes. Full of practical examples of the latest ways in which schools, teachers, education welfare officers and LEAs try to overcome their attendance difficulties. Ken Reid identifies nearly 120 short-term solutions as well as several long-term strategic approaches. The book also considers parental-condoned absenteeism, alternative curriculum schemes and mentoring, while the final chapter presents some strategic issues which policy-makers and politicians need to overcome. This book provides all teachers, deputy heads, head teachers, education welfare staff, social workers, learning mentors and other caring professionals with a repository of up-to-date ideas and solutions. It is essential reading for anyone involved in addressing the challenge of truancy.

Produced Water Aug 20 2022 This book represents the proceedings of the first major international meeting dedi cated to discuss environmental aspects of produced water. The 1992 International Pro duced Water Symposium was held at the Catamaran Hotel, San Diego, California, USA, on February 4-7, 1992. The objectives of the conference were to provide a forum where scientists, regulators, industry, academia, and the enviromental community could gather to hear and discuss the latest information related to the environmental considerations of produced water discharges. It was also an objective to provide a forum for the peer review and international publication of the symposium papers so that they would have wide availability to all parties interested in produced water environmental issues. Produced water is the largest volume waste stream from oil and gas production activities. Onshore, well over 90% is reinjected to subsurface formations. Offshore, and in the coastal zone, most produced water is discharged to the ocean. Over the past several years there has been increasing concern from regulators and the environmental commu nity. There

has been a quest for more information on the composition, treatment systems and chemicals, discharge characteristics, disposal options, and fate and effects of the produced water. As so often happens, much of this information exists in the forms of reports and internal research papers. This symposium and publication was intended to make this information available, both for open discussion at the conference, and for peer review before publication.

Handbook of Contact Mechanics Sep 21 2022 This open access book contains a structured collection of the complete solutions of all essential axisymmetric contact problems. Based on a systematic distinction regarding the type of contact, the regime of friction and the contact geometry, a multitude of technically relevant contact problems from mechanical engineering, the automotive industry and medical engineering are discussed. In addition to contact problems between isotropic elastic and viscoelastic media, contact problems between transversal-isotropic elastic materials and functionally graded materials are addressed, too. The optimization of the latter is a focus of current research especially in the fields of actuator technology and biomechanics. The book takes into account adhesive effects which allow access to contact-mechanical questions about micro- and nano-electromechanical systems. Solutions of the contact problems include both the relationships between the macroscopic force, displacement and contact length, as well as the stress and displacement fields at the surface and, if appropriate, within the half-space medium. Solutions are always obtained with the simplest available method - usually with the method of dimensionality reduction (MDR) or approaches which use the solution of the non-adhesive normal contact problem to solve the respective contact problem.
